

Thick, Tough & Rubbery

REFLEX[®] is spray-applied up to 1/4" thick forming a rugged durable liner for demanding every-day use. It won't crack, peel or warp and permanently protects your truckbed from abrasion and rust. The extreme flexibility of REFLEX[®] provides a rubbery non-slip textured surface that grips your cargo and holds it in place.

Truckbed Protection plus! Cargo Protection

REFLEX[®] protects against abrasion and dents and resists gasoline, diesel, oil, chlorine, fertilizer, acid, and salt. Even in severe freezing temperatures, REFLEX[®] retains its rubbery surface and will not scratch or damage the things you put inside. Because of the rubbery grip, your cargo will not slip-n-slide as it would in a plastic drop-in or hard spray-on liner. REFLEX[®] means protection for your truckbed and your cargo.

Long-Lasting Brilliant Color

There is nothing wrong with black, and with REFLEX[®] you get a great quality jet-black liner or the option of almost any other color you could want. We inject OEM automotive color toners for unmatched UV stability and long-lasting brilliance. Our customers are amazed at the distinctive look whenever their liner is matched to the paint color of their truck. A REFLEX[®] color match makes for a factory-class extraordinary truck liner.

REFLEX®
Color
Injection

US PATENT NO. 6755348

REFLEX® colorant is precisely metered and pressure-injected into the fluid stream, producing total, thru-n-thru color dispersion. This process is patented and exclusive to **REFLEX®**. By using OEM automotive grade paint toners and pigments, **REFLEX®** attains outstanding opacity and UV stability for long-lasting brilliant color. This cutting edge technology eliminates the need for questionable topcoats that are only skin deep and make the surface fragile and slippery. The response by customers who have chosen a special color over black is so positive that we routinely encourage our customers to consider this option. **REFLEX®** proprietary machinery makes color change and application simple, professional and affordable. Whether you decide on black, an accent color or a color match to your truck exterior, **REFLEX®** offers the best selection and the best end result.

Thick, Tough & Rubbery

REFLEX® is thick, tough and rubbery, and that means **Truckbed Protection plus! Cargo Protection.**

REFLEX® customers say the same thing over and over again: "With **REFLEX®**, everything in my truck stays right where I put it." Hard coatings, in many ways similar to plastic drop-in liners do not prevent cargo from sliding around, resulting in damage to both truckbed and cargo. **REFLEX®** does not scratch your tools, equipment or special cargo, like furniture or appliances. While a hard spray-on coating may look good, it does little to prevent dents caused by impact and the abrasive surface will scratch the same cargo that you're trying to protect. Thick, tough and rubbery also means road noise reduction. **REFLEX®** fills and seals all of the metal overlap joints like no other spray-on liner. Check out a sample of **REFLEX®** and compare it to other liner samples. You can see and feel the difference. **REFLEX®** is the best thing you can do for your truck!
